

show_marks

The *show_marks* parameter defines how the actual data points are indicated at the line plots. The following modes are supported:

- *NEVER* - There is no indication of the data points
- *DEFAULT* - In this mode, ADEI will display data point indication if there is enough space or if the missing data is found
- *GAPS* - In this mode the indicators are displayed only if the missing data is detected within the presented time interval
- *ALWAYS* - In this mode the data points are always indicated
